

Mobile Application Development

Application Migration and Redeployment Services

In today's complex business environment, the management is under constant pressure to meet market challenges. Hence, there is a need to create applications to deliver faster time to market, achieve better response time for customer requests, expand to new market segments, and improve business process and operational efficiencies. IT organizations face increasing pressures to deliver more functionality, flexibility – and higher quality – at reduced costs.

Rapidsoft Systems' Application Migration Services

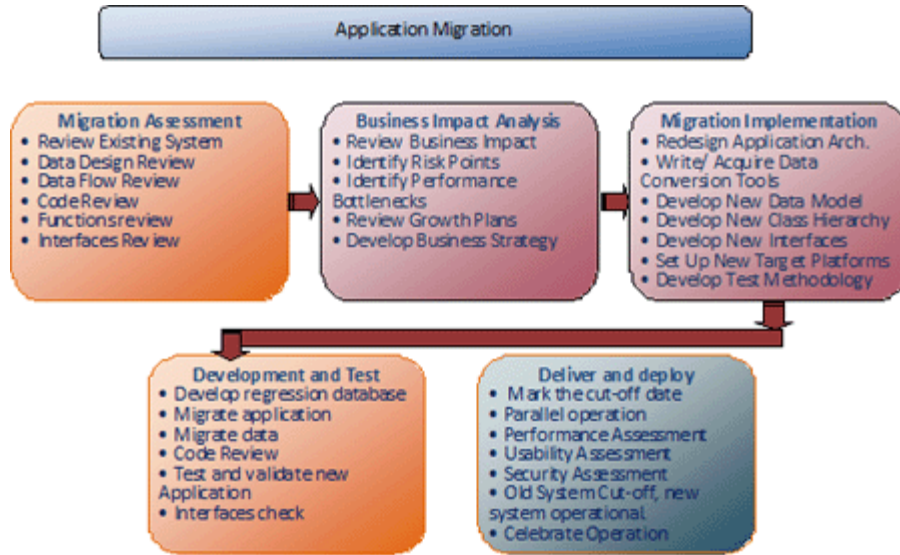

Rapidsoft Systems has established a Migration program that offers a rapid and secure process of moving your strategic applications to the new environment. This also caters to optimization of the basic application, as per requirements.

Software application migration is probably the most important task of moving legacy systems on to more modern platforms - Redhat Linux Enterprise Edition or Windows Server 2008 etc.. The obvious reasons to migrate to modern platforms, is to achieve lower maintenance costs, better response time, improved scalability and enhanced business agility. This means working with proven application migration services providers, to reduce the risk involved in migrating such mission-critical applications.

Making the decision to migrate business systems to a new platform can be difficult in today's economy, considering constrained IT resources and budgets. You must have a compelling business reason, and a positive ROI to justify migrating your business systems from legacy systems to modern platforms.

Our teams are trained to move users from legacy system to new systems.

- **Software infrastructure upgrade/ infrastructure enhancements**
- **Operating system upgrade or change**
- **Migrating applications to optimally utilize new infrastructure software upgrades**
- **Server Hardware or Network Equipment Upgrade Virtual Environment Migration**
- **Integration of Cloud Computing Solutions**

Rapidsoft Systems Main Application Migration Process

Rapidsoft Systems has created engineering processes to handle these migration requirements, while minimizing migration risks. The most important aspect of any migration is managing currently services so that the customer can maintain predefined service levels. We have developed the process migration check list that will minimize interruption or avoid catastrophic failures. Our engineering team takes a detailed system study, and then we devise recommendations for making appropriate choices based on the unique set of requirements of each environment.

The Migration Process

Rapidsoft Systems services experts put technology and proven services methodology to work to help you meet your application migration needs, including high reliability, cost-effectiveness, operational optimization, business agility, and innovation adoption.

Application Migration Services include:

1. Application Migration Analysis

High-level analysis and initial feasibility study of application architecture, source code dependencies and build environment; budgetary estimate for the migration to modern platforms. At this stage we look at hardware, analyse your networking, Server architecture and capabilities using on-site resources. We may even do some performance benchmarking, if needed, to ascertain ROI for you to make system change a worthwhile exercise.

2. Application Migration Assessment

In-depth examination of the application code based on r proprietary operating systems, the build environment, and the application's interaction with other areas of the business process; level of effort estimate and initial migration plan etc. are prepared at this stage.

3. Application Migration Implementation

Porting of an application (including: code transformation, build environment transformation, and application integration (existing environment), database design and conversion, performance benchmarking.

4. Application Migration

At this stage - system migration takes place - the systems may be run in parallel, users may be trained or necessary conversion of process, user documentation etc. will take place here.

Business Benefits

Rapidsoft Systems' Application Software Engineering Team can help organizations realize their business objectives. Rapidsoft Systems' offerings have been instrumental for organizations to achieve operational excellence, reduce costs and provide customers with better products and services. Following are some of the key benefits that have been derived by our customers across the world:

- Reduce the time to develop and implement solutions
- Increase revenue through rapid go-to-market offerings
- Retain customers by more effective process management
- Improve market share by launching innovative products and services
- Increase agility to meet the dynamic business needs
- Utilize existing systems and people in a cost-effective manner
- Reduce operational costs by automating manual/semi-manual processes
- Improve cash flow by better operational management and integrated business processes

Why Rapidsoft Systems:

With over 350+ software projects executed, you can simply count on our expertise, experience in giving you the right solution at absolutely lowest possible cost. If you would like more information, or want us to submit an estimate or a "no-obligation" quote for your project, contact us for more information.
